

ABSTRACT OF THE DISCLOSURE

[Abstract]

A mobile terminal apparatus which, in a case where a pictograph exists in an electronic mail, can
5 express mood and feelings in color and pattern corresponding to the pictograph in various manners is provided.

The mobile terminal apparatus includes a wireless receiving/transmitting unit (10) receiving
10 the electronic mail and a pictograph light driving unit (20) which, when the pictograph exists in the electronic mail received by the wireless receiving/transmitting unit (10), drives a pictograph light display portion (19) in a color and
15 pattern registered in advance in a pictograph light registration unit (18) corresponding to the pictograph. Accordingly, when the pictograph exists in the electronic mail, since the pictograph light display portion (19) is displayed in the color and
20 pattern corresponding to the pictograph, it is possible to easily recognize the mood and feelings of the pictograph existing in the electronic mail by the display of the pictograph light display portion (19).
